

# Real-Time Anomaly Detection (RAD)

From the Solana hack to the collapse of FTX, 3AC, BlockFi, and others, industry professionals need more capable tools to provide advanced market surveillance and risk management in order to operate successfully in crypto. Inca Digital provides those tools.

In crypto finance, social media provides the first indication of market anomalies - not blockchain data and not market data. Inca Digital tracks a wide range of social media activity so users can quickly identify and manage market opportunities and risk.

Inca identified FTX withdrawal issues 1 day before the announcement hit the news.

Inca identified the Solana hack 5 hours before it hit the news.

## RAD Detects the Following Anomalies:

- ✓ Uptime
- ✓ Withdrawal Issues
- ✓ Legal Actions
- ✓ Security Vulnerability
- ✓ Hacker Attack
- Trading Difficulty
- Stolen Funds
- Fraud
- Pump and Dump
- Market Manipulation
- High Volatility
- Misrepresentation of Volumes / Bot Trading / Wash Trading
- Enforcement Actions / Litigation / Court Proceedings
- Market Rule or Functionality Change
- Support Issue
- Degraded Performance
- Downtime
- Access Disruption
- Change in Listing Status
- Regulation Change
- Protocol Maintenance
- Marketing / Promotion
- Planned Upgrade
